

Description:

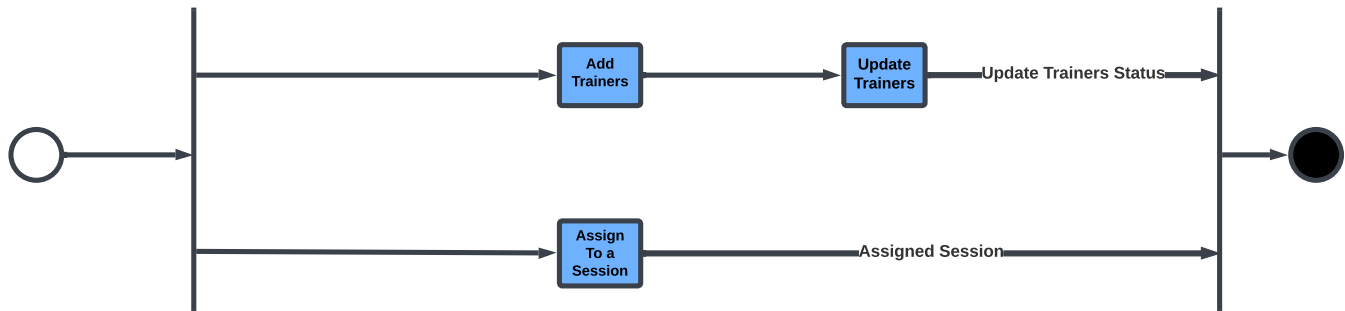

The conditional states that were redundant in the previous assignment were removed from the diagram. In addition, I added the cases shown in pink to the system because I deemed it necessary. Since the template structures explaining the use cases are not in this assignment, the functions of the some newly added cases will be more clearly understood in the sequence diagram and process models. In addition, one thing I would like to point out is that since I did not look at the new assignment in detail, I drew sequence diagrams for about 10 cases, not just 2, and I added them while I drew them.

Process Model of Buy Package

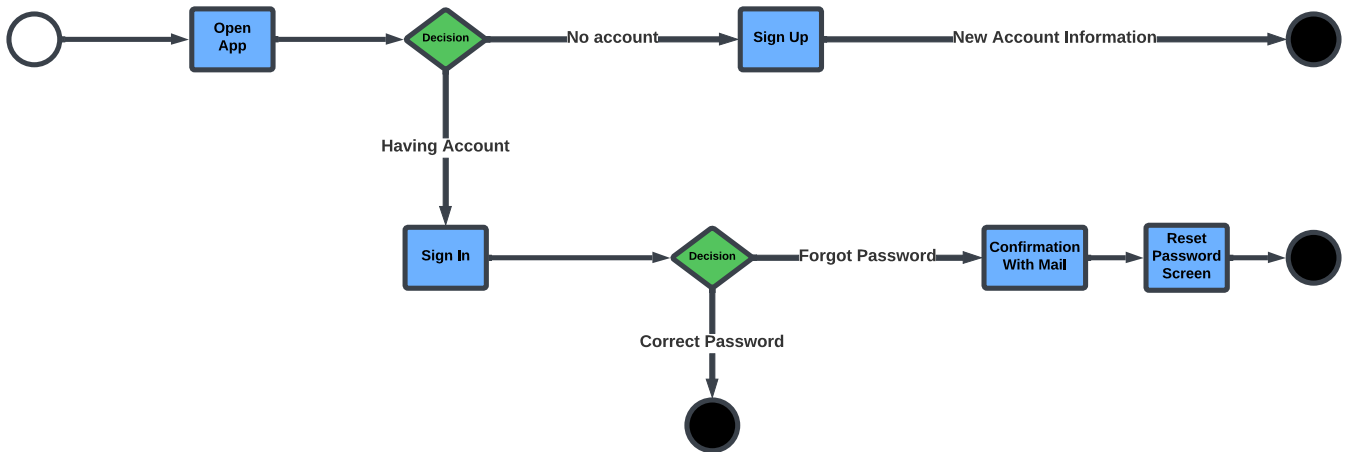

Branch Manager Manage Trainers

Branch Manager Manage Sessions
